

C++ programs in this book

The C++ programs that are presented and explained in this book are listed below in alphabetical order according to their file names. If you know the file name of a program, the list below helps you to find the number of the page where the program is explained. The large programs that are discussed in Chapter 16 are not on the list. All programs in this book can be compiled with the Borland C++ 5.5 compiler. Most of the programs can be compiled with other C++ compilers as well. The programs that may not compile with other C++ compilers are clock.cpp, editor1.cpp (Chapter 16), and playtime.cpp. The reason why these programs can be compiled only with the Borland compiler is that they use a special Borland's header file named conio.h.

addresses.cpp - 1.+ Demonstrating the use of the address operator &	196
animals.cpp - 1: Class Animal, its two constructors, and two other member functions.	364
array.cpp - 1.+ A program that demonstrates the use of an array.	160
bank_better.cpp - 1: An improved version of class Bank_account.	357
bank_pointers.cpp - 1. Creating and using Bank_account objects on the free store.	378
bank_simple.cpp - 1: The definition of class Bank_account and its two member functions.	352
bank_virtuels.cpp - 1: Class Account_with_credit and its redefined withdraw_money().	484
better_date.cpp - 1: Deriving a new class from an existing class.	454
binary.cpp - 1: A function that prints an integer value in binary form.	328
birthdays.cpp - 1. A program that finds the dates for the most important birthday parties.	406
calculate.cpp - 1: First part of the program.	258
calendars.cpp - 1: Class English_calendar and its constructor.	462
capitals.cpp - 1.+ A simple program to find the capitals of some countries.	514
celsius.cpp - 1. Converting temperature values with an initialized array.	170
class_current_date.h - 1. The definitions of class Current_date and its constructor.	458
class_date.h - 1: The definition of general-purpose class Date.	410
class_simple_string.h - 1: The definition of class Simple_string and its default constructor.	392
clock.cpp - 1: The first part of a program that builds a graphical clock on the screen.	336
collect.cpp - 1: The first part of a program to maintain data about a collection.	292
columbus.cpp - 1. Demonstrating the use of Date objects.	405
commanding.cpp - 1. A function main() that prints the given command line arguments.	257
convert.cpp - 1: The first part of a program to make conversions between units of measure.	282
decorations.cpp - 1.+ Function main() calls a function that takes a string as an argument.	226
decrypt.cpp - 1: A program to decrypt a file that has been encrypted with "encrypt.cpp".	536
distance.cpp - 1.+ A program to convert meters to other units of distance.	110
elvis.cpp - 1. Modifying some characters of an initialized string.	178
encrypt.cpp - 1: A program to conceal the content of files.	534
evenodd.cpp - 1. A program to find out whether a given integer is even or odd.	123
events.cpp - 1: The definition of class Event.	550
filecopy.cpp - 1: The first part of a program that makes a copy of a text file.	314
fileprint.cpp - 1.+ A program that reads a text file and prints the text lines to the screen.	312
fileput.cpp - 1.+ A program that writes single characters to a text file.	310
findreplace.cpp - 1: A program to replace a string with another string in a text file.	526
first.cpp - 1. A C++ program that prints a single line of text to the screen.	13
for20.cpp - 1. Program while20.cpp implemented with a for loop.	141
forascii.cpp - 1+ A program that prints an ASCII code table.	144
free_store.cpp - 1. Allocating memory from the free store memory area.	373
friday13.cpp - 1. A program that demonstrates how certain kinds of dates can be searched.	408
fullname.cpp - 1. The input/output of strings.	175
game.cpp - 1.+ A program that implements a simple computer game.	100
highmiddlelow.cpp - 1: Definitions of classes Member_class, High_class, and Middle_class.	470
ifascii.cpp - 1. A program that contains a complex if construct.	128
interest.cpp - 1.+ Calculating interest on interest with a multidimensional array.	172
largeint.cpp - 1.+ A program to find the largest of three integers.	120

largest.cpp - 1. Calling a function with a reference argument.	232
largest_with_return.cpp - 1. largest.cpp rewritten by using the return statement.	233
letters.cpp - 1. Function main() calling a function that calls two other functions.	221
likecpp.cpp - 1.+ A program containing an if-else if-else construct.	126
likecpps.cpp - 1. Program likecpp.cpp rewritten by using a switch-case construct.	132
marilyn.cpp - 1. The use of function strcmp().	189
meanvalue.cpp - 1. A program to calculate the mean value of a set of integers.	147
meanvalue_array.cpp - 1.+ An improved version of program meanvalue.cpp.	166
meanvalue_function.cpp - 1: The first part of the program.	236
memory.cpp - 1: The first part of function print_memory_contents().	342
messages.cpp - 1. Function main() calling a simple function named print_message().	219
miles.cpp - 1. A program that uses floating point variables.	107
months.cpp - 1.+ Demonstration of an initialized array of pointers to string.	212
olympics.cpp - 1: An initialized array of Olympics objects.	276
overload.cpp - 1. A program containing several versions of the function print_array().	262
person.cpp - 1. A program that uses structure variables.	273
planets.cpp - 1: The first part of a program that gives information about planets.	286
playtime.cpp - 1. A program that displays time information after every 5 seconds.	335
pointer_arithmetics.cpp - 1.+ A pointer referring to the elements of an array.	202
pointer_arrays.cpp - 1. A program that explores ten integer positions in memory.	205
pointer_simple.cpp - 1.+ Modifying the values of integer variables with a pointer.	198
presidents.cpp - 1: The definition of the class President.	428
reverse.cpp - 1.+ A program that inputs integers and prints them in reverse order.	164
scope.cpp - 1.+ The difference between global and local variables is demonstrated here.	252
search.cpp - 1: A function that searches for a string in a text file.	316
sentence.cpp - 1. Using a switch-case construct with no break statements.	133
showfile.cpp - 1.+ A program to display the contents of a text file on the screen.	524
showtime.cpp - 1: Two functions that read the time information from the operating system.	332
sizes.cpp - 1. A program that finds out the sizes of C++ variable types.	108
sort.cpp - 1: A program where function prototypes are used.	240
stack.cpp - 1: The definitions of class Stack, its constructor, and its destructor.	382
stack_exploration.cpp - 1.+ A program that prints the contents of the stack memory.	248
stack_template.cpp - 1: The definition of class template Stack_template.	446
states.cpp - 1: A program where objects of the standard class string are defined and used.	502
string_copying.cpp - 1.+ The use of string function strcpy() demonstrated.	186
string_functions.cpp - 1. Using string functions strcpy(), strcat(), and strlen().	188
string_functions_more.cpp - 1. strncpy(), strncmp(), and strstr() demonstrated.	190
string_pointing.cpp - 1.+ Characters of a string accessed with a pointer.	208
string_pointing_more.cpp - 1. More string manipulation by using a pointer.	210
string_reverse.cpp - 1.+ Printing the characters of a string in reverse order.	182
stringadding.cpp - 1. Using operators +, =, and << with Simple_string objects.	391
stringing.cpp - 1: Demonstrating class string constructors and character access.	504
sum.cpp - 1.+ A program to calculate the sum of two integers.	15
sum_improved.cpp - 1. A slightly improved version of program sum.cpp.	18
sums.cpp - 1.+ Function main() calls a function that takes two arguments of type int.	224
times.cpp - 1: Class Current_date and its constructor.	490
titanic.cpp - 1. A program that uses both a Date object and a Current_date object.	459
translate.cpp - 1: The definition of class Bilingual_translation.	546
truth.cpp - 1. A program that prints truth values.	154
uplow.cpp - 1. A program that demonstrates the use of the bitwise-AND operator &.	327
useful_constants.h - 1. A general-purpose include file.	367
useful_functions.h - 1: The first function of the general purpose include file.	440
vectoring.cpp - 1: Demonstrating the use of standard container class vector.	544
weddingdates.cpp - 1.+ Using stringstream and string objects to find the best wedding dates.	516

while20.cpp - 1. A program containing a simple while loop.....	137
whilesum.cpp - 1. A program to calculate the sum of integers in a while loop.....	138
widename.cpp - 1. Referring to individual characters of a string.	179
windows.cpp - 1: Class Window and its constructor.....	474
winter_olympics.cpp - 1: Class Olympics and a table that is an array of Olympics objects.....	368
words.cpp - 1.+ A program that contains four blocks of statements.	150
